

Question 1

What is the difference between Git and GitHub?

Ans: Git is a version control tool, while GitHub is a website for hosting and sharing Git repositories.

Question 2

Explain what HEAD is.

Ans: HEAD is a pointer to the current branch or latest commit you are working on.

Question 3

What happens when you create a new branch?

Ans: Git creates a separate branch so you can work without affecting the main branch.

Question 4

Explain the difference between: git merge and git rebase

Ans: git merge combines two branches and creates a merge commit.

git rebase moves commits to the latest branch history, creating a cleaner history.

Question 5

What does the following command do?

git checkout -b feature/login

Ans: It creates a new branch called feature/login and switches to it.

Question 6

What problem does git pull solve?

Ans: It updates your local repository with the latest changes from the remote repository.

Question 7

What happens when two developers edit the same line?

Ans: Git creates a merge conflict that must be resolved manually.

Question 8

What is a merge conflict?

Ans: A merge conflict happens when Git cannot automatically combine changes from different branches.

Question 9

What command sends your commits to GitHub?

Ans: git push

Question 10

When should you create a new branch?

Ans: When starting a new feature, fixing a bug, or working on a separate task.
